

To,
The Principal,
PSCMR College of Engineering & Technology,
Vijayawada

30th November, 2017

Respected Sir/Madam,

Introduction to Opencube Labs and our CanSat Development Program

Opencube Labs is a research and development organisation that strives to reach young minds of our country through forums that can bring interaction with pioneers. Workshops are held to promote research and learning by providing hands-on experience on training kits. The experience gained from Opencube Labs programs can be a seed of motivation for science and research in future.

We would like to conduct two days **CanSat Development Program** in your institute. This program is designed to give the experience of small-scale space missions to every student in India. At the end of this two days workshop, we guarantee that each of the participants will become an expert in CanSat oriented research projects and they could independently conduct their future CanSat missions for your experiments.

Please find attached an introduction presentation and CanSat Development Program brochure.

We as an organisation conduct training in multiple domains like artificial intelligence, cloud computing, big data, the blockchain, drones, etc.

Awaiting your appropriate response and looking forward to a long-term relationship.

Thank you,

Regards,
Suraj Kumar Jana
Founder & CEO, Opencube Labs
